## Overview

### Description and Specifications:

The Capital Development Board is declaring an Emergency at the Menard Correctional Center Minimum Security Unit in Chester, IL. A slope failure on the North side of the facility has caused damage to security lighting and the outer security fencing. Continued failure of the slope will endanger the buildings and compromise facility security.

## Key Information

Notice Type: Emergency Procurement

Published: 07/14/2011

Notice Expiration Date: 01/17/2012

Emergency Justification: The Menard Correctional Center Minimum Security Unit (MSU) has experienced a slope failure at the facility. The area to the north of the MSU facility is a hillside that began sliding approximately 2 weeks ago. The failure has increased due to continued rains. A 350 foot long concrete retaining wall, constructed in 1996 to stabilize the slope, has failed due to the large amount of rain, allowing the earth above the retaining wall to slide. The concrete retaining wall has separated in at least one area from the steel beams that were designed to hold the wall in place. The 2 inch potable water line that serves the inmate recreation yard drinking water has broken due to ground shifting. The MSU facility incoming electrical service is directly in this area and if the earth continues to shift the facility could be without power. The utility pole has shifted the pole that holds the main line to the facility. The perimeter road from the MSU to the maximum facility has been damaged due to the earth shifting. The road is used to transport inmate workers to or from the MSU facility to or from the Maximum Security facility without leaving the grounds. The road has become impassable. The inmate recreation yard perimeter security fence has begun to slide down the hill and has created a gap below the fence, requiring additional concertina wire. The fiber cable, which provides telephone, cable, and computer access, needs to be relocated from the slope in order to prevent it from breaking. The bank of 7 security lights for the recreation compound have had their foundations compromised and are tilting and dropping. This is a security issue for the compound area. Failure to secure the slope and prevent further sliding is needed to prevent damage to the facility.

Accordance with Admin Rule: Danger to public health/safety, Minimize serious disruption to critical state services that affect health, safety, or collection of substantial state revenues, Protect against further damage to state property
